

Bob Bussiere, Sara Evans

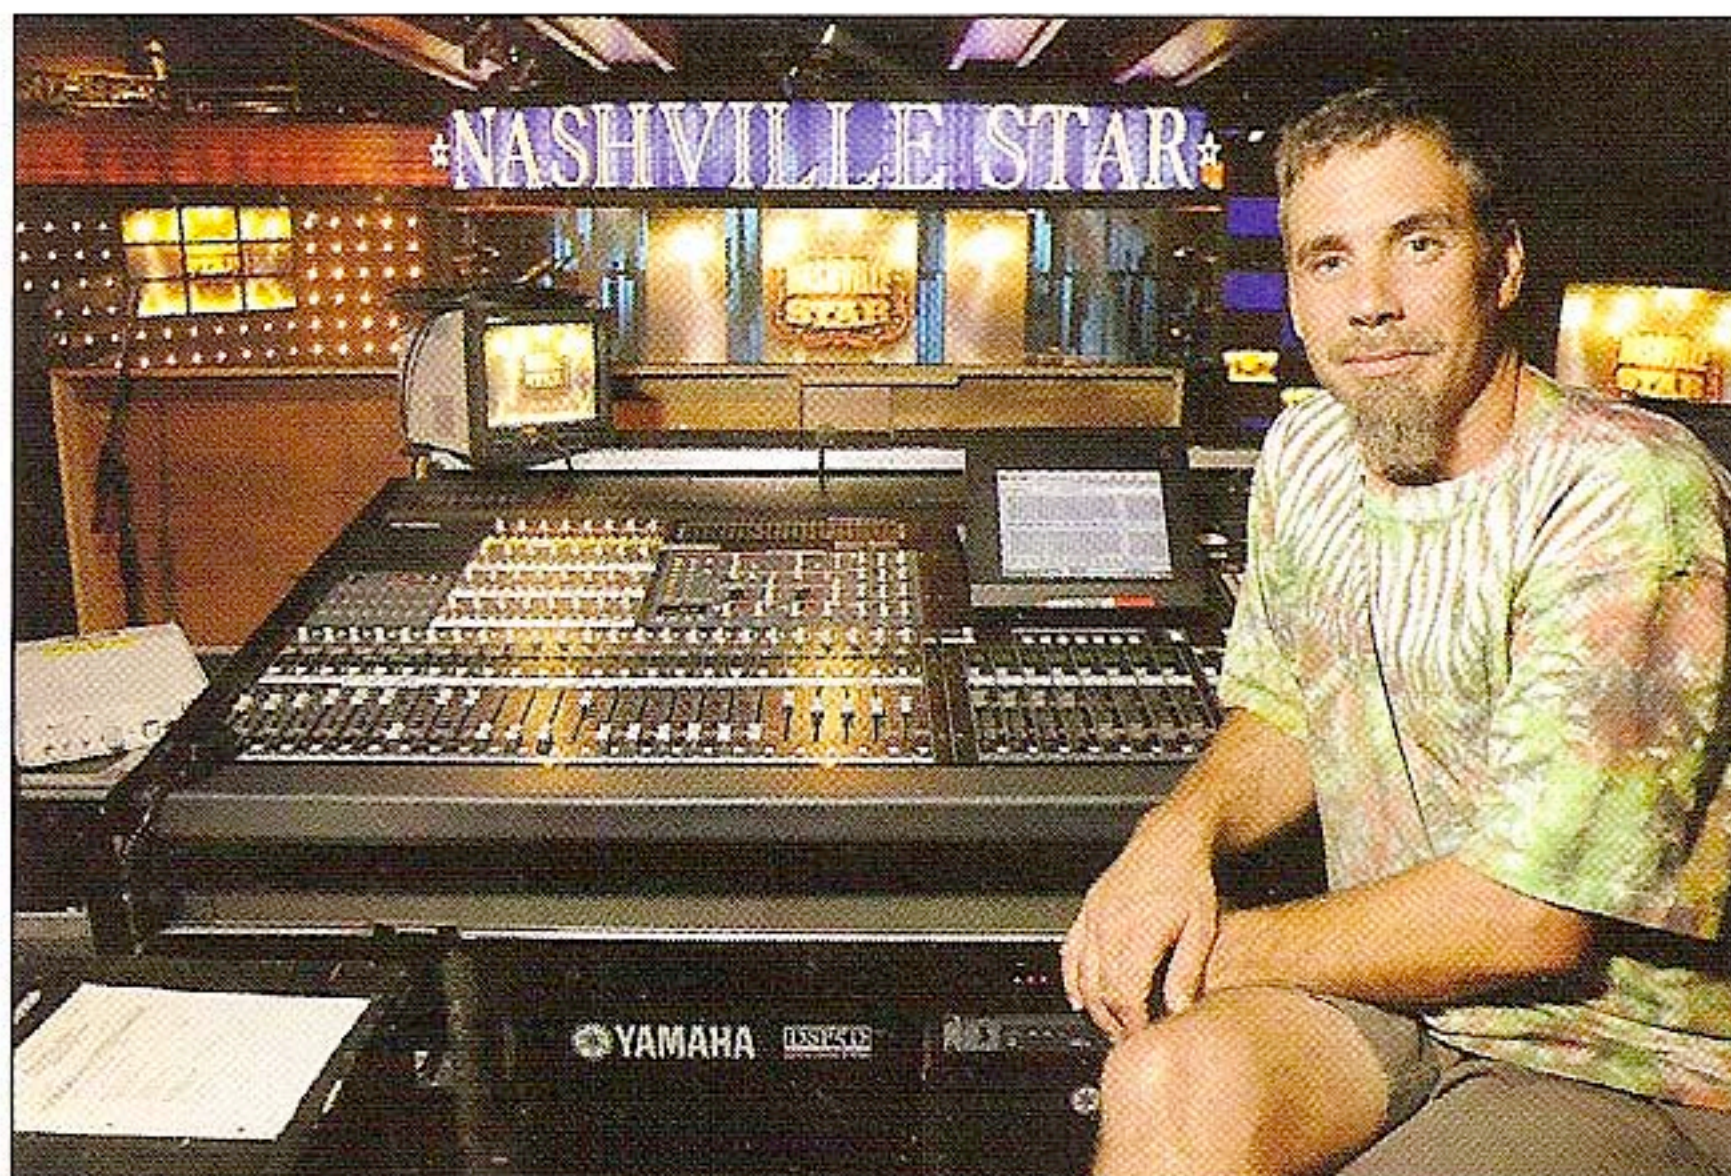

Yamaha PM5D

Bob Bussiere is in his third year mixing monitors for Sara Evans, after having spent a decade on tour with Wynona as the third guy on her Clair Brothers audio crew. He also recently completed his fifth year mixing FOH for *Nashville Star*, having started with the country music talent search television show in its second year, which he mixes on a Yamaha PM5D. He also inherited a PM5D from Evans' previous monitor engineer, and uses four on-board reverb effects for Evans' vocal, background vocals, drums and instruments, noting that he'll add reverb instead of the direct, dry signal to Evans' mix when singers or instrumentalists solo.

Bussiere uses Shure eight PSM 700 wireless personal monitors with a Shure PA821 antenna combiner, as well as four Shure wireless microphones with Beta 58A capsules for Sara, and her two sisters, Ashley and Lesley, plus a spare. Evans uses Westone ES-2 two-way custom molds.

Bussiere also has an Apogee Big Ben digital word clock in his outboard rack, and he uses it to re-clock his PM5D at 96 kHz, and claims it makes about the same difference as going from 48 to 96 kHz on the internal clock. Like many,

he has heard that it makes a sonic difference and notes that it particularly helps with the imaging and panning. He also mentioned a conversation with Clair lead technologist Ron Borthwick, who notes that the audio benefits seem to accompany a higher level of distortion.

Bob Bussiere, seen here at *Nashville Star*, also mixes monitors for Sara Evans.

Andy Ebert, Stone Temple Pilots

Digidesign D-Show

Andy Ebert uses a Digidesign D-Show with a sidecar to his right, places all the faders within easy reach, as he does much of his mixing on the VCAs. Except for guitarist Dean DeLeo Ebert relies on Sennheiser G2 IEMs with a professional Wireless GX8 antenna combiner, which brings the ew 300 transmitters' 20 milliwatt output up to the legal maximum of a quarter watt, which helps compete with the RF generated by the video wall.

The band uses Ultimate Ears UE-11 custom molds which he says are especially good for bass players and drummers and are the first in-ear molds he has enjoyed using with his iPod without extensive EQ. Lead singer Scott Weiland likes to pop his ears out from time to time, so the stage is equipped with Showco SRM wedges, Prism "blue" boxes and subs, laid on their sides for side fills, and a pair of Clair ML18 subs supplement the drummer.

Ebert uses URS EQ plug-ins on the drums for additional EQ, as well as an outboard SPL Transient Design on the toms to change their attack and sustain. Other plug-ins include the ReVibe and TC reverbs, plus the Eventide Harmonizer, which he uses a "voice doubler" to smooth and fatten vocals.

Though he uses Beta 58 capsules with older U4D hand-held transmitters, he looks forward to trying a Heil PR35 capsule that he's been using on bass player Robert DeLeo's

wired vocal mic, which he says has good rejection, better highs and lows, plus sounds cleaner.

Ebert started with Stone Temple Pilots when they reformed last spring, and before that was with Neil Young, and with Velvet Revolver, where he first met STP's Weiland. Previous work includes Guns N Roses, Maroon 5, Red Hot Chili Peppers and Mariah Carey. STP travels to South America this month, before resuming North American shows.

Andy Ebert, on tour with Stone Temple Pilots.
